Competency Remediation & Support Guide

NurseBridge Training Lab – Scenario 3

Purpose

This guide helps learners who have not yet passed EHR competency validation identify gaps, rebuild confidence, and prepare for re-evaluation.

Understand the Gap

1. Do you understand workflow but freeze under pressure?
2. Are you getting lost navigating?
3. Are you unsure what step comes next?

Focus on One Workflow

Break learning into smaller parts such as MAR, flowsheets, and notes. Master one before moving to the next.

Practice Structure

1. Open patient chart
2. Navigate to correct section
3. Complete one task
4. Verify and repeat

Common Reasons for Failure

1. Switching tabs too quickly
2. Skipping workflow steps
3. Clicking without understanding
4. Anxiety during testing

Confidence Tips

1. You are learning, not failing
2. Many learners need multiple attempts
3. Accuracy before speed

Safety Reminder

Always verify your documentation. Accuracy supports patient safety.
