# New Hire EHR Survival Guide

NurseBridge Training Lab – Scenario 1

## Purpose

This guide helps new hires build confidence, navigate the EHR more effectively, and succeed during onboarding.

## Step 1: Focus on One Workflow at a Time

Do not try to learn everything at once. Focus on one workflow (e.g., MAR, notes, flowsheets) and build comfort step-by-step.

## Step 2: Use a Consistent Navigation Pattern

1. Open patient chart
2. Go to the correct section (MAR, Notes, Flowsheets)
3. Complete one task fully
4. Double-check before moving on

## Step 3: Ask for Help Early

If you feel lost, ask immediately. Trainers expect questions. Waiting too long increases confusion.

## Step 4: Build Confidence Through Repetition

Repeat the same workflow multiple times. Confidence comes from repetition, not speed.

## Common Struggles (Normal!)

1. Getting lost between tabs
2. Not knowing where to click next
3. Feeling slower than peers
4. Being afraid to ask questions

## Confidence Tips

1. You are learning a new system — not failing
2. Everyone learns at a different pace
3. Accuracy is more important than speed
4. It will become easier with practice

## Safety Reminder

Always verify your work before submitting documentation. Patient safety depends on accurate charting.
